DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-7,10-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 915' Note that Ep teaches a copper holder with a hafnium insert, as claimed, with a silver or silver alloy boundary layer separating the holder and the insert. The claims call for a graded transition between the elements and it is obvious that Ep does teach this barring further description of the same, since the layer of silver is "metallurgic"

Art Unit: 3742

ally bonded", see page 3, line 49. Note hafnium is disclosed for the insert and as per claim 11, cooling is strictly conventional in most plasma torch electrodes. Use of a rod shaped or twisted wire core is considered an obvious choice, as per claims 6 and 7, the shape dependent on the end use of the device. Note that force fit is used to position the insert, see page 5 line 52. Use of powder forming techniques, as per claim 10 is an obvious choice, considering the widespread use of the same in torch electrode construction.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ep 915' as applied to claims 1-7,10-22 above, and further in view of Prucher. In view of Prucher teaching a star shaped core as conventional, the artisan would have found it obvious to use the same in the EP electrode, this choice dependent on the end use of the torch.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ep 915' as applied to claims 1-7,10-22 above, and further in view of Lu et al 399'. In view of Lu et al teaching use of parallel inserts as conventional, the artisan would have found it obvious to use this shape in the core of Ep 915, this choice dependent on the end use of the torch.

Art Unit: 3742

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nemchinsky and Severance, Jr. et al are cited for disclosing plasma torches of interest.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark H. Paschall whose telephone number is 703 308-1642. The examiner can normally be reached on 7am - 3pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on (703) 305-5766. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
